Power BI Interview Preparation

Hindi + English Answers | Fresher Data Analyst | Concepts, examples, practical interview responses

Complete practice set: 38 questions with English answer, Hindi explanation, and examples where useful.

How to use this PDF

First understand the Hindi explanation, then practice saying the English answer aloud. For code/formulas, explain what each part does. Adapt project claims to what you actually built and verified.

Q1. What is Power BI?

English answer: Power BI is Microsoft's business intelligence platform for connecting, transforming, modeling, visualizing, and sharing data.

Hindi explanation: Power BI Microsoft ka BI tool hai jisse data connect, clean, model, visualize aur share karte hain.

Q2. Explain Power BI workflow.

English answer: Connect to data, transform in Power Query, build relationships/model, create DAX measures, design report, publish and refresh.

Hindi explanation: Data connect → Power Query cleaning → relationships → DAX measures → visuals → publish/refresh.

Q3. What is Power Query?

English answer: Power Query is the ETL layer used to extract, transform, and load data before it enters the model.

Hindi explanation: Power Query data ko load karne se pehle clean aur transform karta hai.

Q4. What is DAX?

English answer: Data Analysis Expressions is the formula language for measures, calculated columns, and calculated tables.

Hindi explanation: DAX Power BI ki formula language hai—measures, calculated columns aur tables ke liye.

Q5. Measure vs calculated column?

English answer: A measure is calculated on demand under filter context; a calculated column is computed row by row and stored in the model.

Hindi explanation: Measure filter ke hisab se calculate hota hai; calculated column har row ke liye store hota hai.

Q6. What is a relationship?

English answer: A relationship connects tables through matching columns so filters and calculations can flow between them.

Hindi explanation: Common key se tables connect hoti hain, jisse filtering aur calculations possible hote hain.

Q7. What is a star schema?

English answer: A star schema has a central fact table connected to dimension tables, usually simplifying analysis and DAX.

Hindi explanation: Center me fact table aur around dimensions—jaise Sales fact with Date, Product, Customer.

Q8. Fact vs dimension table?

English answer: Fact tables store measurable events such as sales; dimensions describe entities such as product, customer, date, and store.

Hindi explanation: Fact me transactions/KPIs; dimension me product, customer, date jaise descriptive details.

Q9. What is cardinality?

English answer: Cardinality describes relationship uniqueness: one-to-many, many-to-one, one-to-one, or many-to-many.

Hindi explanation: Cardinality batati hai key unique hai ya repeat—one-to-many etc.

Q10. What is filter context?

English answer: Filter context is the set of filters affecting a DAX calculation, from slicers, visuals, rows, and CALCULATE.

Hindi explanation: Slicer, visual aur CALCULATE ke filters milkar calculation ka context banate hain.

Q11. What is row context?

English answer: Row context means DAX evaluates an expression for the current row, common in calculated columns and iterators.

Hindi explanation: Current row ke context me expression calculate hona row context hai.

Q12. What does CALCULATE do?

English answer: CALCULATE evaluates an expression after modifying filter context.

Hindi explanation: CALCULATE filter context ko change karke expression evaluate karta hai.

Example: `CALCULATE([Total Sales], 'Region'[Region]="West")`

Q13. SUM vs SUMX?

English answer: SUM adds a numeric column; SUMX iterates a table and evaluates an expression for each row before summing.

Hindi explanation: SUM direct column total karta hai; SUMX row-by-row expression calculate karke sum karta hai.

Q14. What is SAMEPERIODLASTYEAR?

English answer: It returns the corresponding date period one year earlier, typically used with a proper date table and time-intelligence setup.

Hindi explanation: Date table ke current selected period ka pichhle saal wala period return karta hai.

Example: `Sales LY = CALCULATE([Total Sales], SAMEPERIODLASTYEAR('Date'[Date]))`

Q15. How do you calculate YoY growth?

English answer: Subtract prior-year sales from current sales and divide by prior-year sales, handling zero or blank values.

Hindi explanation: Current aur previous year ka difference, previous year se divide karke growth % nikaalte hain.

Example: `YoY % = DIVIDE([Total Sales]-[Sales LY],[Sales LY])`

Q16. What is a slicer?

English answer: A slicer is an on-canvas visual that lets users filter report data interactively.

Hindi explanation: Slicer user ko date, category, outlet jaise filters interactively select karne deta hai.

Q17. What is drill-through?

English answer: Drill-through navigates from a summary visual to a detail page filtered for the selected data point.

Hindi explanation: Summary se selected item ki detailed report page par jana drill-through hai.

Q18. What is a tooltip?

English answer: A tooltip shows extra context when users hover over a visual data point.

Hindi explanation: Visual par hover karne par extra details dikhata hai.

Q19. What is a KPI?

English answer: A key performance indicator measures progress toward a business objective, such as sales, margin, or customer satisfaction.

Hindi explanation: KPI business goal track karta hai, jaise total sales, average order value, rating.

Q20. How do you choose a chart?

English answer: Use bars for comparisons, lines for trends, cards for headline metrics, and maps only when geography matters.

Hindi explanation: Comparison ke liye bar, trend ke liye line, headline number ke liye card use karo.

Q21. What is a dashboard vs report?

English answer: A report can contain multiple interactive pages; a dashboard in Power BI Service is a single-page canvas of pinned tiles.

Hindi explanation: Report multi-page interactive ho sakta hai; Service dashboard single-page tiles ka view hai.

Q22. What is a date table?

English answer: A date table is a continuous, unique calendar table marked as a date table for reliable time intelligence.

Hindi explanation: Continuous unique calendar table time intelligence ke liye important hai.

Q23. Import vs DirectQuery?

English answer: Import loads data into the model for in-memory analysis; DirectQuery queries the source, with different performance and freshness tradeoffs.

Hindi explanation: Import data model me load karta hai; DirectQuery source se query karta hai. Performance/freshness trade-off hota hai.

Q24. What is row-level security?

English answer: RLS restricts which rows a user can see based on roles and identity.

Hindi explanation: RLS user ke role ke hisab se visible rows restrict karta hai.

Q25. How do you improve report performance?

English answer: Reduce model size, use star schema, remove unused columns, prefer measures, limit heavy visuals, and inspect Performance Analyzer.

Hindi explanation: Unused columns hatao, model optimize karo, visuals kam rakho aur Performance Analyzer check karo.

Q26. What is a bookmark?

English answer: A bookmark captures a report page's state, such as filters, visibility, and selected visuals, for navigation or storytelling.

Hindi explanation: Bookmark report ki selected state save karta hai; navigation/buttons me use hota hai.

Q27. What is conditional formatting?

English answer: It changes visual appearance based on values or rules to highlight patterns and exceptions.

Hindi explanation: Value ke basis par color/icon change karke important results highlight karte hain.

Q28. How do you publish a report?

English answer: Publish from Desktop to a workspace in Power BI Service, configure credentials/refresh, permissions, and app sharing as needed.

Hindi explanation: Desktop se workspace publish karo; credentials, refresh aur access permissions set karo.

Q29. Explain your Blinkit dashboard objective.

English answer: The dashboard summarizes sales and item performance across product categories and outlet attributes to support business monitoring.

Hindi explanation: Blinkit dashboard ka aim sales, item performance aur outlet/category comparisons ko ek jagah dikhana hai.

Q30. Which Blinkit KPIs did you use?

English answer: Typical headline KPIs are Total Sales, Average Sales, Number of Items, and Average Rating; confirm exact definitions against the dataset.

Hindi explanation: Main cards: Total Sales, Average Sales, Number of Items, Average Rating. Definition dataset ke columns se verify karni chahiye.

Q31. How did you clean the dashboard data?

English answer: I checked data types, blanks, duplicates, inconsistent labels, and column names in Power Query, then validated totals.

Hindi explanation: Power Query me data types, blanks, duplicates aur inconsistent labels check karke totals validate kiye.

Q32. How do slicers help managers?

English answer: They allow comparisons by outlet location, outlet size, item type, or other available dimensions without rebuilding visuals.

Hindi explanation: Manager filters se outlet/location/category ke hisab se same KPIs compare kar sakta hai.

Q33. What insight can a dashboard provide?

English answer: It can reveal which categories or outlet segments contribute more or less, and how metrics vary; state only patterns verified in your actual report.

Hindi explanation: Dashboard category/outlet contribution aur metric differences dikha sakta hai; interview me wahi insight bolo jo actual chart se verify ho.

Q34. How do you validate a Power BI report?

English answer: Reconcile totals with source data or SQL, test slicers and relationships, inspect blanks, and check calculations on sample records.

Hindi explanation: Source/SQL totals match karo, slicers/relationships test karo aur sample rows se measures verify karo.

Q35. What challenges did you face?

English answer: A credible answer could mention data quality, relationship direction, date table setup, or choosing readable visuals—use only challenges you actually encountered.

Hindi explanation: Apne actual challenge ka example do—data cleaning, relationship, date table ya visual layout. Fake challenge claim mat karo.

Q36. What is a many-to-many relationship risk?

English answer: It can create ambiguous filter paths or unexpected totals; a bridge table or redesigned model may be safer.

Hindi explanation: Many-to-many se ambiguous filtering/totals aa sakte hain; bridge table/model redesign consider karte hain.

Q37. What is incremental refresh?

English answer: It refreshes only configured recent partitions instead of reloading all historical data, subject to licensing and setup requirements.

Hindi explanation: Sirf recent data partitions refresh karta hai, poora historical data nahi; setup/licensing conditions hoti hain.

Q38. How do you explain Power BI to a non-technical manager?

English answer: I turn raw business data into interactive visuals and KPIs so teams can monitor performance, compare segments, and investigate changes.

Hindi explanation: Raw data ko interactive KPI/report me badalta hoon, jisse manager performance monitor aur reason investigate kar sake.

Interview tip: If you are unsure of a detail, explain your understanding honestly and describe how you would verify it.
